

Building a Deck on a Portable Pool

Building a Deck for an EZ Lap Pool

A 7' x 42' EZ Lap Pool, installed in the ground and decked over.

The pool pictured above is a 7' x 42' EZ Lap Pool that was installed in the ground. Then the customer covered it with a deck and voilà — a beautiful decked lap pool. But the real beauty was this cost them 1/10th the cost of a traditional in-ground lap pool.

Yes an EZ Lap Pool is a portable pool, but not like those cheap kiddie pools you find at the grocery store during the summer. These are quality, US Made, pools that are built to last. And because an EZ Pool can be placed on-the-ground, it can also be placed in-the-ground too.

Take a look at the pictures below to get an idea of just how easy it is to put a deck around an EZ Lap Pool, or contact us for advice.

Fully in-the-ground with a Deck

Hole dug and deck framework built.

Pool laid out in the space, ready to be erected.

Deck framed and the pool erected.

Liner full, deck work in process.

Completed pool.

Partially in-the-ground with a Deck

This customer needed to level their ground before they could set up their EZ Lap Pool. But they did not want to go to the extent of going completely into the ground. So they partially dug down to level the ground, then built the deck up around it.

Customers have proven again and again that an EZ Lap Pool can do everything an in-ground pool can do for a whole lot less money. In the case with this customer, they replaced an old metal-sided above-ground pool.

Leveling the ground.

Preparing for the deck supports.

Deck framing out, liner going in.

Assembled pool, finishing the deck supports.

Pool filled, joists complete.

Deck surface in place.

The finished deck with railing and steps.

EZ Pool on the ground with a Deck

Sometimes a customer cannot go in the ground. In the case of this customer, their house was on a hill. If they put in a traditional in-ground pool, the ground would shift each year, cracking the concrete. So instead, they built a box around an EZ Lap Pool and covered it with flagstone.

The net result is a beautiful extension of their house, with a magnificent view in the background. But more importantly, the use of an EZ Lap Pool not only saved them a tremendous amount of money — it made it possible to have a pool without the impending doom of a cracking shell every year because of ground movement.

Flagstone surround, cover drawn back.
